The Long Hauler™

The Latest News from J&J Truck Bodies & Trailers • Volume XII • Issue 1 2011

A Letter from the President

J&J Truck Bodies & Trailers is a division of Somerset Welding & Steel.

The team at J&J Truck Bodies & Trailers wishes you a happy and successful new year. As we enter a busy 2011, I'm reminded of what our motto - "Built for the Long Haul" - really means. It extends beyond the quality of our products and speaks to the relationships we've built in the industry. We've been in business for over fifty years, and now our company has withstood the worst recession since the Great Depression. During the downturn, we were able to expand into new manufacturing projects and still maintain the quality and workmanship that's unique to a J&J truck body. We were able to maintain excellent benefits for our employees, and we're thrilled to add back to our workforce this year. We're proud to report that the year ahead looks strong, and we'd like to thank the customers and employees who have stuck with us. We look forward to continuing these valued partnerships. And if you've still not done business with us at Somerset Welding and Steel, we invite you to experience what "Built for the Long Haul" really means in 2011.

Sincerely,

Bill Riggs / President, Somerset Welding & Steel

New Truck for PA Township

New Britain Township in Pennsylvania recently took possession of their new truck which was mounted with a medium-duty J&J steel dump body. Prior to delivery, the truck was shown at the recent New Jersey League of Municipalities Show in Atlantic City. U.S. Municipal, an authorized distributor of J&J Truck Bodies & Trailers, provided the Mack GU712 chassis. The township will use the truck for road maintenance, construction, and other municipal applications.

The J&J dump body is 11 feet long, 96 inches wide, and 36 inches high. A special light package was ordered that included LED lights at the bottom and top of every side post, auxiliary trimount plow lights, and a built-in tailgate light bar. Other options included slide-out ladder, grab handles, tailgate chain covers.

SOMERSET WELDING & STEEL

BUILT FOR THE LONG HAUL™

J&J DEMO UNIT FOR SALE

Chassis: 2010 International 7400

If you encounter any problems getting to the survey, please email skh@jjbodies.com and we will send you a link. Employees of Riggs Industries or any of its subsidiaries are not eligible to participate.

Material Haulers (MH): The Most Popular J&J Dump Body

These J&J dump bodies are the most popular with our customers. They are versatile, reliable and can be used for a variety of hauling applications. Custom tool boxes, light packages and tarping systems are just some of the available options. An excavating company purchased this Peterbilt chassis from Hunter's Truck Sales in Smithfield, Pa.

McClymonds Supply, a leader in the dry bulk commodity hauling industry purchased 10 of these MH bodies that were mounted on Mack chassis provided by the customer. J&J mounted polished material hauler dump bodies on the trucks that were 19 feet, 6 inches long, 96 inches wide, and 72 inches high.

Use the **SEARCH** button to easily find the various models we have available. Simply type in MH, SE, LDC, etc.

SE Semi-Elliptical

On The Road

Hunter Keystone provided this Peterbilt chassis and J&J mounted a steel semi-elliptical dump body on it. The truck will be used by an excavation company. The self-cleaning body is designed to easily and quickly discharge all payload.

LDC Light-Duty Chassis

Walsh Equipment provided this Ford chassis and J&J mounted a polished aluminum dump body. It will be used by a government agency for light hauling, road maintenance, and construction applications. Light-duty dump bodies are also used widely by landscaping companies.

PVT Pressure Vacuum Tank

Tri-County Motors provided this International chassis and J&J installed a steel pressure vacuum tank. It will be used to haul non potable water in the Marcellus Shale region where natural gas drilling has become an important industry.

Repair and Refurbish at J&J Truck Equipment

New trucks and equipment are a major investment. At J&J Truck Equipment, we can help you extend the life of your current fleet with quality repair and refurbishing. Rely on our experience to provide you with working equipment for a fraction of the cost of new.

Several of these bottom dump trailers were sent to J&J Truck Equipment for complete overhauls. The work included refurbishing axles, suspension, air, and electric and hydraulic components. In addition, the lower hopper body and doors, upper hopper body and supports, and all fenders were replaced.

On this repair job, the JJTE staff sand blasted the body and crane, repaired rusted areas of the truck, cleaned, prepped, primed, and painted the entire unit. The crane was test operated and inspected for required repairs, and when the repairs were made, the crane was back to near new condition.

After years of wear and tear, the owner of this transfer trailer sent it to us for a new moving floor. At J&J, we can install new flooring systems allowing our customers to save money and to get additional life out of their equipment.

Custom solutions from J&J Truck Equipment.

New Flat Bed for Equipment Company

The hardwood flat bed floor on this Chevy truck features a 40 inch high custom bulkhead and a rear tapered diamond plate apron. It was outfitted with two Bauer underbody polished stainless steel tool boxes. It was ordered by a local rental company that will use it for transporting equipment to customer locations.

Crane Service Trucks

Our crane service trucks are available in many configurations. We can install air compressors, generators, custom drawers and shelves, and equipment storage areas. These trucks are widely used at job sites to repair large machines that otherwise would be costly to transport to garages.

Open or Enclosed Lube Trucks

At J&J Truck Equipment, we can provide you with complete lubrication units that are designed to service your equipment in the field. They are available in steel, aluminum, stainless, and our latest in copolypropylene. Hoses and reels are typically located at the rear or side of the unit for operator safety and ease of use.
